**Test Comments:** Jim commented that the field surrounding the trials yielded 202 bpa. Seedling emergence was very uniform. About 2-4% green snapping was noted in lodging scores, so a wind storm had hit this area. Some minimal root lodging was also noted. Disease pressure was moderately high. Ear development was very good with 6-7" ears which had excellent grain quality. Plant height ranged from 8-10'.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
