**Test Comments:** *Brian said that an early July severe wind storm caused tremendous green snap in later planted fields, like these tests. Hi earlier planted corn surrounding the trials was not affected by the wind as much. Some hybrids in the trials suffered green snap of up to 30-50% of plants. Disease pressure was very high at this site. Some hybrids died early which is somewhat reflected in the low grain moistures.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
