Test Comments: This test planted perfectly, and seedling emergence was excellent. The site was conventional tilled corn following soybean with little to no previous crop residue to harbor disease inoculum. This crop had a moderate level of disease, but did not appear to cause much impact since yields were high. Plant height range was 10-13'. Ears were 7-8" long with great kernel depth. Stalk lodging was minimal.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceeded the grain moisture limit for this test. **ns** = column values not significantly different
