TEST COMMENTS: *Joe's conventional tillage soybean field planted great, and provided excellent final populations. Timely and abundant in-season rains produced very large plants (48-60" tall) that lodged slightly. Seed size was large and of good quality. Replication 1, harvested before a rain, averaged 11% grain moisture while reps 2 & 3, harvested days later, had 19-20% moisture, elevating average grain moisture.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
