**Test Comments:** Tom said this plot received 8" of rain within hours after planting. Both of us were surprised by how good the final stand was. Monthly rainfall totals are: May 1.5", June 0.5", July 3", and August 1.5". The low yield level is partly due to 96 degree heat during pollination. Some hybrids had no ear development. Yields were variable, but hybrids with better yield displayed good tolerance to high stress.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
