Test Comments: *Planting conditions were great at this location. I intended to plant 37,500 seeds/ac but the wrong sprocket was accidentally used when setting the planter. Site received good rainfall most of the year. Joe indicated that the field around the plot averaged 235 bu/ac. Due to the population, stalks were small in diameter, but were still standing good and holding onto all the ears. Little disease to note.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
