TEST COMMENTS: *This location was planted the first week of May, during a two day window suitable for planting, then it started to rain consistently again. Early season growth was good and beans looked good all season long. Plants were short, with short internodes. This helped to prevent any lodging. Diseases were minimal and pods were filled with larger than average seeds. Overall a nice uniform location.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
