TEST COMMENTS:

This location was the first planted in this region on April 27th, in nice soil conditions but colder temperatures than normal for that time of year. The plot was very dry from June 7th till July 14th, but received timely rain events from then on keeping things going nicely. Plants were very green still at harvest and made for tougher than normal picking. Large ears were filled out to the tip with strong ear shanks. Very minimal foliar disease was seen in this location.
